										11.

- Memory bank management: setup the
  300 memory channels easily in a spreadsheet type interface. Data can be imported from CSV, TXT or HTML
   files.
- Editor for search ranges.
- Software supports the Windows clipboard for easy copy/paste between
   applications.
- Easyfill option for quick setup of new memory banks.
- Data can be exported to CSV data format.

- Driver: the UBC75XLT driver is included with ARC75.
- Webcatcher: Connect your Uniden scanner to the Internet! The built in WebCatcher option makes it possible to read and import frequency data directly from any website.
- Easily find and remove duplicate frequencies.
- Import frequencies from the RadioReference database.
- Windows XP/ Vista / Win7 / Win8 compatible.
