

Retractable Gear Attachment Systems

First engineered for SCUBA diving, the Gear Keeper is a rugged, retractable gear attachment system, designed to utilize and protect gear in **severe environments with maximum break strength and durability.**

The **Quick Connect (Q/C and Q/C-II) System** is a patented feature of the Gear Keeper® Retractor Systems. This retracting connection and attachment system was designed to:

- Offer an easy way to **disconnect gear** from the Gear Keeper Retractor
- Minimize the **tethering length** (length from gear to retractor)
- Reduce cable wear with a **pivoting ball connection**

Both the **Q/C and Q/C-II connection systems**, based on National Moldings patented ½" and ¾" side-release buckle designs, offer very strong connection, durability, and ease of use.

The wide range of **Q/C accessories** offer flexible solutions to almost any gear attachment problem. For example, you can now fit all your gear with a **Male** connector for use with the same retractor. And the stand-alone **Female** connectors offer a way to easily attach gear when retraction isn't necessary. The system is as flexible as your imagination!
